## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-10 are rejected under 35 U.S.C. 102(e) as being anticipated by Yeung et al. (7,171,468).
3. Yeung teaches a method and system (abstract) of managing file transfer actions in a shared file system among multiple clients (col. 1, line 1 – col. 4, line 67) via a central document management apparatus (col. 5, line 1 – col. 6, line 60). The system logs the history (col. 9, line 50) and provides the information by tree structure and flow models (col. 10, lines 15-55). The creation of a document includes the creation of attribute information (col. 11, line 30 – col. 12, line 10), and acceptance of the attribute information entry and the development of unique IDs and parent sub IDs (col. 15, line 45 – col. 17, line 65; wherein attribute info = meta data, unique ID = file name, and sub ID = file path or folder name) in a hierarchical structure (col. 18, lines 50-55). The information may then be displayed in an interface similar to that claimed (col. 21, line 15 – col. 29, line 35).

***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. They regard further teachings on document managers, hierarchical IDs, attribute information, and the like.
